INDEX

TO

VOLUME I.—MDCCCXXXV—XXXVI.

A

ABDOMEN, crushing of, 18.
Abdominal tumours, 180.
Abercrombie, Dr. degree of, 641.
Abscess in the perineum, 295.
Acephalocyste of the brain, 45.
Acne indurata, creosote in, 193.
Aconitum as an emmenagogue, 86.
Adder, suicide of, 63.
Advertisement, professional, 837; of quack pills, 880.
Air-pump in strangulated hernia, 58.
Aldersgate School of Medicine, 5.
Aldis's Clinical Reports, 110.
Almanack, British Medical, 392.
Alexander, Dr., on infantile remittent fever, 99, 293.
Amaurosis from suppressed passion, 569.
Amenorrhœa, sinapisms to the mammæ in, 904.
Amputation, below the knee, 95; of the arm, 87.
Amputations at Breslau, 57.
Amussat, M., on artificial anus, 256; on traumatic hemorrhage, 450.
Anasarca, idiopathic, 436; with other disease, 685.
Anatomy in Ireland, 877.
ANDRAL, Professor, course of lectures by, on *Diseases of the Brain and Nervous System:*—
LECTURE 1.—*Introduction.*—The peculiar difficulties which surround the investigation of nervous diseases; points to be weighed in considering the causes of those diseases; their complication with other diseases; extreme obscurity of their pathology; modern changes in their character; the senses of observation helpless in their study; difficulties caused by the disposition to theorize; state of the nervous force not generally remarked; different changes or lesions in the brain, producing nearly identical symptoms; the brain not a single organ, but yet united by a vital unity; difficulties of investigation caused by idiosyncrasies, by the same lesion of the brain producing the most varied symptoms, and by the complications of sympathy; modifying influence of age; the great majority of the diseases of the nervous system present no perceptible changes of structure; reasons why pathological anatomy is at fault; chemical and nutritive changes of the brain; indications of the treatment of nervous diseases; influence of imagination; means of clearing obscure points in the pathology of the nervous system; order and spirit to be observed in the present course of lectures, 353.
LECTURES 2 and 3.—*Congestion of the Brain.*—The various anatomical or pathological characters of cerebral hyperemia; considerations to be observed in examining its morbid appearances; influence of atmospheric temperature in producing cerebral congestion; other atmospheric effects; effects of stimulants and narcotics on the brain; cerebral congestion from diseases within the brain; from affections of other organs; from venereal pleasure and abstinence, age, and mechanical forces; general symptoms of cerebral congestion; first variety or form; second, or *coup de sang;* third, hemiplegia; fourth, paralysis; fifth, furious delirium; different symptoms of cerebral disease; attempts to localize the cerebral functions; congestion and other affections of the cerebellum; congestion of the spinal marrow; terminations of cerebral congestion; indications of treatment, 393.
LECTURE 4.—*Encephalitis.*—The most striking phenomena in the disturbed functions; lesions of the digestive and circulatory apparatus; lesions of respiration; modifications of symptoms; the three varieties of acute encephalitis; practical importance of this division; duration and termination of the disease; treatment by bleeding and cold; different modes of applying cold; revulsives and purgatives; mercury, is calomel a specific in inflammation? character of the chronic form of the disease; chronic inflammation of the cerebellum, 425.—(Note to this lecture)—Explanation of

the term encephalitis; symptoms simulating the disease; three divisions of it; anatomical characters and causes, 631.

LECTURE 5.—*Myelitis, or Inflammation of the Spinal Marrow*—Division into acute and chronic; anatomical characters, and parts which it attacks; causes and symptoms; lesions of motility; lesions of sensibility in the neighbourhood of the spine; in distant parts; diminution of sensibility in the disease; difficulty of deglutition and articulation; derangement of the digestive functions; of the circulation and respiration; modifications of the secretions; effects of the disease on the organs of generation; diagnosis; diseases simulating irritation of the spinal marrow, according to the views of Messrs Griffin and Ens; duration, termination, and treatment of myelitis, 473.

LECTURE 6.—*Anemia of the Brain and Cerebral Hemorrhage.*—(1. *Anemia*)—Its simulation of hyperemia; anatomical characters; symptoms; delirium; delirium from withdrawing stimulants; disturbance of sensibility and motility; treatment.—(2. *Cerebral Hemorrhage*)—Impropriety of using the term apoplexy; parts of the brain in which it occurs; meningeal apoplexy; sanguineous cerebral cysts; appearance and source of the effused blood; period when cicatrization is effected; state of the brain near the effusion, of its mass, and of the membranes; causes and periods of cerebral hemorrhage; influence of a diminished aortic caliber; changes in the venous circulation; general plethora; sex and age, 521.

LECTURE 7.—*Cerebral Hemorrhage* (continued)—Symptoms of actual effusion; premonitory symptoms; the disease without them; symptoms depending on other morbid changes than effusion; case of effusion without a symptom of that lesion; paralysis as a symptom; case without paralysis; intermitting paralysis: hemorrhage into the cerebral hemispheres; hemiplegia and its indications; sixteen cases of hemiplegia occupying the same side of the body as the lesion in the brain; inquiry into the portions of the brain severally influencing the upper and lower extremities; effusion upon the brain as affecting motility; lesions of the pons varolii.

LECTURE 8.—*Cerebral Hemorrhage* (continued).—*Lesions of Motility and Sensibility.*—Does paralysis follow this lesion? On which side is it?—thirty-two cases of this lesion; which lobes the effusion occupies; hemorrhage into both cerebrum and cerebellum; effusion of blood into the spinal marrow; paralysis of muscles of the eyes and cheeks; paralytic affections of the tongue, the neck, the organs of respiration and deglutition, the rectum, and the bladder; duration and terminations of paralysis; order of its disappearance; lesions of sensibility in the brain itself; modifications of sensibility in the skin and mucous membranes; disturbance of the organs of various portions of the brain particularly affected; blindness from the disease; modifications of hearing, 601.

LECTURE 9.—*Cerebral Hemorrhage* (continued).—*Lesions of Intelligence.*—Lesions giving premonitory symptoms; alteration of the intellectual faculties at the moment of effusion; differences in the seat and extent of hemorrhage; no such lesion in spinal hemorrhage; state of the intellect after the effusion; affections of the speech, circulation, respiration, and generative organs in cerebral hemorrhage, 649.

LECTURE 10.—*Cerebral Hemorrhage* (concluded).—*Peculiar Varieties.*—Symptoms attending cerebral hemorrhage which do not seem characteristic of it; first class of symptoms; contraction and spasmodic affections of the limbs; their treatment; impulses to advance and retreat; delirium and somnolency attending apoplexy; symptoms unconnected with cerebral lesions; duration and progress of apoplexy; other varieties; treatment; abuse of venesection, arteriotomy, leeches, and revulsives; treatment of paralysis especially; prevention of apoplexy; hypertrophy of the brain, 729.

LECTURE 11.—*Hypertrophy of the Nervous Centres.*—Anatomical character of hypertrophy of the cerebrum; cerebral hypertrophy, with and without enlargement of the cranium; causes favouring the lesion; periods of occurrence, and symptoms; lesions of intelligence, sensibility, motility, respiration, and circulation, in cerebral hypertrophy; its divisions into the chronic and acute periods; varieties and treatment; partial hypertrophy of the cerebrum; hypertrophy of the cerebellum, and its influence on the genital apparatus; hypertrophy of the spinal marrow, 761.

LECTURE 12.—*Atrophy of the Brain and Spinal Marrow.*—General description; its division into congenital and gradually acquired atrophy; great diminution of the nervous centres; symptoms from changes in the osseous parietes; chronic hydrocephalus as one form; cerebral hernia following atrophy; atrophy with the brain normal but very small; atrophy from deposits in the brain; parts of the brain most liable to atrophy, atrophy of the cerebrum in particular; atrophy of parts above and below the lateral ventricles; entire absence of the anterior cerebral lobes; absence of one anterior,

the middle, or the posterior lobes; atrophy of the posterior horn of the lateral ventricles; simple diminution of the cerebral volume; absence of the thalami and corpora striata; ages most subject to cerebral atrophy; atrophy of the white central parts, and the pineal gland, 809.

Lecture 13.—*Atrophy of the Brain and Spinal Marrow* (concluded).—Atrophy of the pons varolii; measurements of the brain; atrophy of the cerebellum; complete absence of the cerebellum, and its influence on the genital organs; simple diminution of its volume; atrophy of one side of the cerebellum only; atrophy of the cerebellum conjoined; entire absence of the spinal chord; imperfections and diminutions in that chord; atrophy and absence of nervous protuberances; atrophy of the medulla oblongata; ramollissement of the brain, 841.

Lecture 14.—*Ramollissement of the Nervous Centres.*—Anatomical appearances in softening of various parts of the nervous pulp; variations chiefly in colour; lesions whose nature is wholly unknown; different seats of ramollissement in the cerebrum, in the hemispheres, in the central and deep parts, in the cerebellum and spinal marrow; causes of ramollissement; common to all periods of life; symptoms, accompanied by derangements of intellect, of motion, and convulsions.

Lecture 15.—*Ramollissement of the Nervous Centres* (continued).—Ramollissement, with contraction of the muscles; paralysis, convulsions, epilepsy, tetanus; lesions of motility and sensibility; headache; lesions of sight, hearing, and the nutritive processes; acute and chronic ramollissement, and their varieties; ramollissement without any symptoms; order of succession of the symptoms; terminations; instances of paralysis affecting the same side of the body as the lesion in the brain, 921.

Lecture 16.—*Ramollissement of the Nervous Centres* (concluded).—Ramollissement of the central white parts; of the septum lucidum in particular; of the fornix and corpus callosum; peculiar phenomenon accompanying these ramollissements; their resemblance to acute hydrocephalus; ramollissement of one lobe of the cerebrum; lesions of movement in that ramollissement; lesions of sensibility; general ramollissement of cerebellum; ramollissement of the mesocephale; in the annular protuberance, simulating apoplexy; ramollissement of the entire cerebral mass, 953.

Andral's Clinique Medicale, 147.

Anemia of the brain, 522.

Aneurysm, of the subclavian, 95; of the thoracic aorta, 498.

Aneurysmal tumour of the orbit, treated by ligature of the common carotid, 860.

Animal kingdom, Treviranus's division of, 455.

Anti Medical Quackery Society, 949, 977.

Antimony, tartarized, in pneumonia, 315; employment of, 882.

Antrum, disease of, 153.

Anus, artificial, cured by a new process, 256; formation of, 561; produced by a wound, 571.

Aorta, diminished caliber of, 222.

Aphonia, case of, 903.

Apoplexy of the lungs, 101; inquests in cases of, 392; during pregnancy, 882.

Apothecaries' Company, regulations of, 11; effect of, 631; rejection of a student by, 636; meeting on the rejection, 668; address to, from the London University, 880.

Apprenticeships, medical, term of, 423.

Arachnoid, hemorrhages into the cavity of, 45; false membranes of, 792.

Arsenic, poisoning from, 436; test for, 877.

Arteries, state of, in inflammation, 87 (see also *Med.-Chirurg. Review*); new treatment of wounded, 331.

Artery, radial, wound of, 332; brachial, wound of, venesection of, 331.

Asthma thymicum, 301.

Atrophy, of the brain and spinal marrow, 81 (see *Andral*); of the valves of the heart, 946.

Auscultation in stone, 135; M. Raciborski on, 584.

Austria, liberality of, respecting French degrees, 590.

Aylesford, North, Union, medical contract for the poor at, 299.

B

Bailliere, Mr., letter from, 189.

Barker, Mr., on gouty concretions, 821.

Barry, Sir David, death of, 264.

Battley, Mr., Sir H. Halford's puff of, 52.

Beau, M. on the movements of the heart, 827.

Bedingfield, Mr., on a metropolitan medical union, 837.

Bell, Sir C., address of, at the Middlesex Hospital School, 89; on diseases of the spine, 230; letter from Edinburgh respecting, 641; appointment of, at Edinburgh, 470; a word of advice to, 668.

Belladonna, preservative effect of, against scarlatina; 300; remarkable effects of, in erysipelas, 758, 806.

Benedict, Professor, articles by, 56.

Benson, Dr., case by, of pulsation in the veins of the arm, 176.

Bieske, M., case by, of insanity, from sabre wounds of the head, 828.

Biology of Treviranus, 453.

Birmingham School of Medicine, 63, 840.

Bladder, rupture of, 18; from a blow, 19; from a fall, 21; broken catheter extracted from, 532.

Blenheim-street School, introductory address at, 90; memorial of teachers of, respecting the new University, 628.
Blockhead of a lecturer, 187.
Blood, fatty matter in the, 373; analysis of Mr. Osborn on, 865; answer to, 916; analysis of, in the vena portæ, 935; and urine, in health and disease, 969.
Blood-letting, Wardrop on, 144, 348, 383.
Blucher, Colonel, case of, 828.
Blundell, Dr. T. L., note from, 727.
Bodington, Mr., case by, of vomiting, 695.
Borough hospitals, abuses at, 138.
Books received, 32, 96, 224, 320, 520, 599, 647, 888, 984.
Bow, Dr., on nervous induction, 927; on the physiology of the spleen, 930; on inflammation and fever, 931.
Brain, concussion of, 270; disease of, affecting the sight, 317. (See *Andral, M.*)
Bread, brown, effects of, 825.
Breast, scirrhus of, 952.
Bree, Mr., on paracentesis abdominis, 40.
Breslau University, medical statistics of, 56.
Bright, Dr., on fever, 596.
Brodie, Sir B., on diseased antrum, 153; advice of, to hospital pupils, 155; lecture on epulis by, and operations in general, 277.
Bronchial irritation, mistaken for croup, 497.
Bronchitis, acute, cases of, 96, 196; treatment of, 336.
Bronchotomy in scalded glottis, 958.
Broughton, medical appointment at, 941.
Bryan, Mr. E. L., on the sounds and motions of the heart, 501; on Dr. Williams's reclamation respecting them, 866.
Buckland, Mr., on super-sulphate and super-acetate of iron, 102.
Buck, Dr., case of vaginal cystocele by, 975; cases by, of extirpation of uterine polypi, 971.
Burnett, Mr. G., notice of, 266.
Busk, Mr., case of aneurysm of the orbit by, 860.
Bury St. Edmunds, meeting at, 16, 59.
Bury, Mr., letter from, 350.

C

Cæsarean operations, 181, 449, 572, 701; discussion on a case of, 217.
Calcis, Os, caries of, 151.
Calculi in the urethra, 597; urinary, complicated case of, 708.
Callieux, M., case by, of loss of the tongue in a horse, 626.
Calomel, influence of, in scalded glottis, 958.
Cancer, knotty, operations for, 57; manchineel juice in, 266; of the rectum, successfully removed, 376; of the uterus, case of, 567.
Carburetted hydrogen, 75.
Cardamom seeds, 341.
Caries of the os calcis, 151.
Carmichael, Mr., letter by, on the election at Richmond Hospital, 714.
Carswell's Pathological Anatomy, 969.
Case for opinions, 149.
Castor-oil plant, 341.
Catalepsy complicated with hysterical symptoms, 16.
Cataract, operation for, 152.
Catarrh, case of, 195; elixir for, 264.
Catheterism in stricture, 816.
Catheter, new one, 341.
Cecly, Mr., on poor-law medical contracts, 387.
Cerebellum. (See *Andral, M.*)
Cerebrum. (See *Andral, M.*)
Certificates, question respecting, 751.
Chancellor of the Exchequer, visits to, 633.
Chaplain at St. George's Hospital, 642.
Charing-Cross Hospital, 552.
Cheetham, Mr. J. P., cases by, of glanders in the human being, 594.
Chelius, Professor, on ligatures of the thyroid, 292.
Chest, diseases of, errors of diagnosis in, 652.
Cheyne, Mr., case by, of abscess in the perineum, 295.
Chimney-sweeper's cancer, 312, 349.
Chlorosis, treatment of, 275.
Cholera, malignant, unctuous boluses in, 76.
Chomel, M., in London, 192.
Chorea, pathology and treatment of, 937; sulphur-baths in, 938.
Christ's Hospital, ringworm at, 140; election at, 141, 182; Sir P. Laurie's vote at, 184; Mr. Tarbutt's letter on, 345, 349.
Circulation, derangement of, 554.
Clanny, Dr., on fire-damp, 16; Mr. Roberts on the paper of, 75; on flame, 360.
Clarke, Sir Charles, present to, 836; and the Metropolitan University, 888.
Clinical lectures in London, 319; at Guy's, by proxy, 580.
Cloquet, Jules, M., in London, 192; visit of, to St. Bartholomew's, 222.
Clot Bey, honours to, 216.
Cock's Anatomy of the Head and Neck, 113.
Cæcum, rupture of, 18.
Colic from lead, 52.
Colica pictonum, creosote in, 276; spasmodica, followed by inflammation, 565.
College of Surgeons, London, regulations of, 11; last election into the Council of, 25; exclusions from, 209, 216.
College of Surgeons, Ireland, annual elections at, 711.
College of Physicians, changes in, 588; reform in, 879, 885; meeting at, 886.
Colon, stricture of, 463; accumulations in, 916.
Commons, House of, 808.
Comparative Anatomy, Dr. Jacob on, 211.
Concours at the London University, 260; in Paris, 590.
Concretions in gout, 821; in the intestines, 965.
Concussion of the brain, 270.

Conium maculatum, means of preparing the leaves of, 950.
Constipation, protracted, 463.
Consumption, pulmonary, inunction of lard in, 446.
Contraction of the fingers after inflammation of the fore-arm, 628.
Contracts by Boards of Guardians, 309, 803, 804.
Conwell on Diseases of the Liver, 206.
Cooke, Mr., case by, of loss of the uterus, 644.
Coombe Lying-in Hospital, 559.
Cooper, Sir A., on irresponsibility at the Borough hospitals, 130.
Copaibal rheumatism, cases of, 625; Mr. Maddock on, 700.
Copland, Dr., on delirium with tremor, 318, 391.
Cragie, Dr., inquiry respecting, 641.
Coroners' inquests, remuneration at, correspondence respecting, 630, 798; law relating to attendance at, 942; discussion on bill for, in the House of Commons, 905; remarks on the bill, 913; petition in favour of, 945; remarks on petitions in favour of, 946, Mr. King on, 950.
Coroners, medical, election of, 590, 599, 804, 838, 878, 984; Rogerson on, 888, 912.
Correspondents, 96, 160, 192, 224, 271, 320, 391, 424, 472, 520, 552, 600, 647, 728, 759, 808, 840, 888, 920, 952, 984.
Cosgreave, Mr. P., election of, 116.
Councilship in the College, 267.
Country practitioners, news for, 311.
Coup de Sang, M. Andral on, 400.
Coxalgia terminating in peritonitis, case of, 538.
Creosote in vomiting, 157, 447, 694, 984; in gastrodynia, 124, 275; in colica pictonum, 276; in acne indurata, 193; trials of, at Paris, 263; in gonorrhœa, 435; in glanders, 594; failure of, in some cases, 593; Dr. Roots on, 662.
Crisp, Mr., case by, of deranged circulation, 534.
Croton oil in cynanche trachealis, 429.
Croup, inflammatory, tracheotomy in, 29; autopsy in a case of, 31; new mode of treatment in, 178; without cough, 253; cases mistaken for, 496.
Crown-and-Anchor, report of meeting of students at, 668; remarks on, 667; address respecting, 881.
Cummin, Dr. W., 749, 751, 801, 835, 880.
Cuticle, desquamation of, 463.
Cutler, Mr., inguinal hernia treated by, 155.
Cyclopædia of anatomy, 585.
Cynanche trachealis, croton oil in, 497.
Cyst in the thyroid gland, 219.
Cystotomy, 179.

D

Davidson, Mr., on medical magnetism, 540; Dr. Schmidt's answer to, 593; reply of, 715.
Dean Swift, skull of, 503.
Deglutition and articulation, loss of, 787.
Delirium, with tremor, lecture on, 161, 225; Dr. Copland on, 318, 391; designation of, 350; furious, 402; with debility, 806.
Dermott, Mr. G. D., 213, 261, 720.
Dewhurst, Mr. W. H., 631.
Diabetes, sugar in the blood in, 254; iodine in, 519.
Diet and exercise, 777.
Dieffenbach, Professor, case of artificial anus by, 571.
Dilatation of the lymphatics, 969.
Disinterment at Moulton, 381.
Dislocation of the humerus on the dorsum scapulæ, 758.
Dispensatory, New London, 123.
Dissection wounds, treatment of, 464.
Don, Mr., election of, 647.
Donne, M., on the relation between the pulse, respiration, and animal heat, 795.
Double vision, cases of, 877, 934.
Dropsies in connection with perspiration and urination, 304.
Drowning, resuscitation from, 698.
Druitt, Mr., note from, 715.
Dublin, Ophthalmic Infirmary in, 559; Royal Society, conduct of, 978; Surgical Society, proceeding at, 982.
Dublin Medical Journal for January 1836, 581.
Dunn, Mr., letter from, 214.
Duodenum, rupture of, 18.
Dupuytren's museum, 263.

E

Eagle, Mr. F., on copaibal rheumatism, 625; on syphilis, 825.
Eastern Medical Association, 87.
Eczema, singular case of, 463, 506.
Edinburgh chair of surgery, 329, 349, 598.
Edmonds, Mr., on the mortality of English counties, 364, 408; remarks on the papers of, 380, 420; on the mortality of infants, 691; on the laws of sickness according to age, 855.
Edwards, D. O., Mr., letter from, 223.
Elliotson, Dr., clinical remarks by, on acne indurata, treated with creosote, 193; struma, 195; inflammatory rheumatism, 195; catarrh, 195; bronchitis, 196; scirrhus of the womb, 197; disease of the lungs and heart, 198; deformity of the spine; pain in the head, chlorosis, gastrodynia, colica pictonum, 276; erysipelas, 321; gonorrhœa in the female, 435; poisoning with arsenic, 436; idiopathic anasarca, 437; on some skulls from the Mauritius, 457. (See also *North-London Hospital.*)
Ellis, Mr., clinical lecture by, on wounds of the stomach, 17; comments on the reform lecture of, 307, 389.
Elston, Mr., case by, of salivary concretion, 134.
Emancipation, effects of, on medical practice in the colonies, 719.

Empyema, lecture on, by Dr. Roe, 288; paracentesis thoracis in, 284.
Encephalitis, acute, symptoms of, 426; varieties, 426; treatment, 428; chronic, causes and symptoms of, 430.
Entomology, 145.
Epilepsy, from injury of the head, 200; modified, case of, 697.
Enterolithus, case of, 965.
Epps, Dr., letter from, 319; on monopolies in medical education, 515.
Epulis, clinical lecture on, by Sir B. Brodie, 277.
Erinensis on the conduct of the Royal Dublin Society, and the proceedings of Ministers, 978.
Erysipelas, nitrate of silver in, 322; complicated, fatal case of, 322; lecture by Mr. Liston on, 324; puncture in, 327; of the head, case of, remarkable effects of the extract of belladonna in, 758, 806.
Errata, 16, 128, 160, 224, 271, 320, 341, 472, 647, 728, 759, 808, 888.
Erythema, characters of, 324.
Evett, Mr., note from, 759.
Exfoliation of bone, reproduction after, 646.
Extra-uterine fœtation, discussion on a case of, 217; Dr. Ramsbotham's letter on, 266.
Extravasation of urine, from external injuries, 19; in children, 20; local differences between, into cellular and serous tissues, 22.

F

Facial nerve, section of, by disease, 45.
Faraday, Mr., on the silicification of plants, 756.
Farnham, inquest at, 257, 263, 345, 351.
Farr, Mr., lectures by, on hygiene, 240, 773.
Features, artificial, 338.
Feces and urine, non-secretion of, during many years, 702.
Fergusson, Dr., on medical aid for the sick poor, 747.
Ferral, Mr., note respecting, 919.
Fever, nature and causes of, 131; convalescence from, followed by death, 268; treatment of, Dr. Bright on, 596.
Fieschi, head of, 936.
Fingers, contraction of, 622.
Flame, nature and qualities of, 360.
Fleishmann, Dr., on belladonna as a preservative against scarlatina, 300.
Flogging, death from, 875.
Food of plants and animals, changes of, 108.
Fosbroke, Dr., on diseases of the heart, 438, 629.
Fox, Mr., on the election of parochial medical officers, 941.
Fractures, bad effects of splints and tight bandages in, 168, 245, 288; treatment of, without splints, 461; Mr. Wardrop on, without splints, 710; Dr. Wallace on, 627; Mr. Sherwin on, 498; of the tibia, cured without splints, 248; of the tibia and fibula, and of the femur, similarly treated, 249; bleeding in cases of, 250; of the neck of the scapula, 270; of the tibia and fibula, with paralysis, 335; treatment of, 384, 423; death after, 384; simple, of the leg, followed by gangrene, 615; of the jaw, cases of, 741; of the patella, new mode of treating, 783; of the olecranon, 807; of the thigh, 807.
Free Hospital, Greville-street, proceedings at, 840, 944, 981.
Fungus medullaris, of the pelvis, 695; malignant, of the penis and groin, 894.
Furlonge, Dr., case by, of modified epilepsy, 697.

G

Gangrene, senile, case of, 371; of the lungs in the insane, 793.
Gastritis, chronic, case of, 488.
Gastrodynia, creosote in, 124. 275.
Gazette Medicale, January 1836, 772.
Guardians, boards of, contracts of, 309, 803.
Generation of living and dead matter, 105.
Genital organs, effects of hypertrophy of the cerebellum on the, 765.
Geohegan, Dr., on poisoning by hydrocyanic acid, 175.
Gerson, Dr., on traumatic cataract, 43.
Gibson, Mr., case by, of spasmodic colic, 565.
Girten, Mr., on ancient and modern black nations, 40.
Glanders treated with creosote, 594.
Glottis, scalded, cases of, 958.
Goitre, lymphatic, ligature of thyroid arteries in, 252.
Gonorrhœa, cases of, with condylomata, 125, 157, 598; in the female, 435; creosote in, 435; nitrate of silver in, 499.
Gonorrhœal rheumatism, Mr. Samuel on, 746.
Gouty concretions, case of, 821.
Gowing, Mr., case by, of strangulated inguinal hernia, 699.
Goyraud, Dr., on inguino-intestinal hernia, 450.
Grainger, Mr., present to, from his pupils, 883.
Green, Mr., on the use of setons in hydrocele, 334; lecture by, on fatal simple fracture of the leg, 615.
Green, Dr. P. H., cases and remarks by. (See *Hopital des Enfans.*)
Gregory, Dr., report by, on small-pox and vaccination, 831.
Gregory's Conspectus, by Dr. Venables, 209.
Grimstone, Mr., puff of, 52.
Grisolle, M., on colic from lead, 52.
Guislain, M., on gangrene of the lungs in the insane, 793.
Gum diseases, synopsis of, 55.
Guthrie, Mr. operation by, on the jaw, 189.
Guy's Hospital, 160; reports, 596; address to the Hall from, 920; obstetric society at, 983.

H

Hache, M., on pericarditis, 796.
Hahnemannism in London, 755, 787, 840; doctrines of, 932.
Halford's, Sir H., puff by, of Mr. Battley, 123.
Hamilton, Dr., the late, 381.
Hancock, Dr., note from, 801.
Hawkins, Mr., on the skull of Dean Swift, 503.
Hemorrhage, into the arachnoid, 45; traumatic, researches in, 450; of the cerebellum, 601; cerebral, peculiar varieties of, M. Andral on, 729; from the mouth, severe case, 863; ligatures in, 934.
Hemorrhoid in the rectum, 295.
Head, pain in, treated with carbonate of iron and hydriodate of potash, 274; injury of, 518.
Heart, case of disease of, 222; disease of, following rheumatism, 235; disease of, elucidating difficulties of diagnosis, 458; sounds and motions of, 501; Dr. Fosbroke on diagnosis of diseases of, 620; movements of, 827; Mr. Bryan on the sounds of 866; atrophy of the valves of, 946.
Hecker's Annalen, articles in, 58; Vol. 2, Nos. 3 and 4, Vol. 3, No. 1, 867.
Heidelberg, hospital statistics at, 981.
Heifer, the, early breeding in, 376.
Hemiplegia, M. Andral on, 401, 557.
Hemming on uterine diseases, 144.
Hentsch and Tweedie, Messrs., proceedings against, 840, 944; letters from, 981.
Hermaphrodism, an instance of, 375; in an orang-outang, 963.
Hernia, inguinal strangulated, 15, 75, 90, 155, 669; strangulated, cured with the air-pump, 58; ligature in umbilical, 57; strangulated femoral, 153; memoir on inguino-intestinal, 450.
Hip-joint, diseases of, lectures on, 482, 528.
Hirsch, Dr., on thymic asthma, 201.
Hippocrates, life and doctrines of, 773.
Hodgson, Mr., case by, of phlegmasia dolens, 73.
Home, Sir E., one of the caustic bougie cases of, 770.
Hooper, Mr., note from, 349.
Horse, loss of the tongue in, 626.
Hopital des Enfans Malades, Paris, cases at, and remarks on, by Dr. Green:—Croup, 29; tracheotomy in croup, 29; autopsy in croup, 31; laryngo-tracheitis mistaken for, 54; meningitis of the convexity of the brain, 56; of the base of the brain, 37; tubercular meningitis in a child after measles, 492; tubercular meningitis in a child after measles and phthisis, 573; tubercular meningitis preceded by small-pox, 780; tubercular meningitis terminating in acute hydrocephalus, 781; typhus fever in the young, 859, 901; chorea, pathology and treatment of, 937; pleuro-pneumonia with pericarditis, 939; lobular pneumonia with laryngitis and bronchitis, 940.
Hospital irresponsibility, 139; functionaries, attendance of, 668; Samaritan Society, 756.
Hospitals and Schools of Medicine, in London, list of, open to students in the session 1835-36, 1.
Hourmann and Dechambre, MM., on the diseases of old persons, 705.
House of Commons, discussion on the Medical Witnesses Bill in, 905; remarks on discussion at, 913.
House-surgeon, election of one, by concours, 909.
Hufeland's Journal, 300; elixir for catarrh, 264.
